MONITOR

H50.11

Referral Recommendation

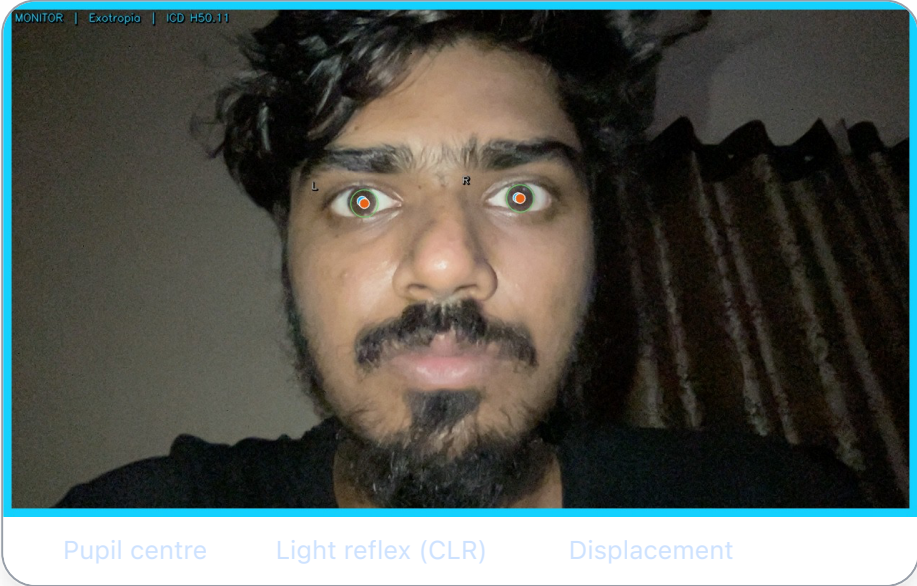

Monitor and re-screen in 3 months

Timeframe: 3 months

What This Means

This screening detected a mild asymmetry in the corneal light reflex. This may be within the normal range, but monitoring is recommended. Please re-screen in 3 months or sooner if you notice any change in eye alignment.

Annotated Scan

How AI Calculates This

1. Eye Detection

Face located and eye regions extracted.

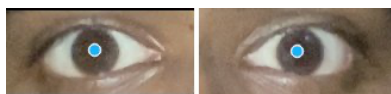

2. Pupil Center

Center of both pupils localized.

3. Light Reflex

Corneal light reflex (flash) identified.

4. Displacement Vector

Distance between pupil and reflex measured.

Clinical Measurements

Deviation angle	10.23°
Displacement (mm)	1.46 mm
Asymmetry score	0.093
Severity	MILD
Dominant eye	left
Detection confidence	MEDIUM

Displacement Detail

LEFT EYE

25.4%

Temporal

RIGHT EYE

16.1%

Nasal

 Quality Flags
